4. Give the state table for a Turing Machine that multiplies a string of consecutive 0's and 1's by 2. The machine should treat the initial contents of the tape as a natural number written in binary form, with the least significant bit at the end. That is, if the contents of the tape are 01101, then the right-most 1 represents the number 1, the middle 1 represents the number 4 and the left-most 1 represents the number 8. Then the number on the tape is 8+4+1=13.

5. Give the state table for a Turing Machine that multiplies a string of consecutive 0's and 1's by 2. The machine should treat the initial contents of the tape as a natural number written in binary form, with the most significant bit at the end. Then the number of the tape is 2 + 4 + 16 = 22.
